

PPWR Declaration of Conformity, Reg. UE 2025/40 for BIOPAP LC trays

-Since the design phase of our products and materials, we have never considered the use of fluorinated substances (PFAS).

Furthermore, the results of PFAS content determination following solvent extraction and subsequent LC MS/TOP analysis of the sample demonstrate the complete absence of detectable traces of these compounds.

-The samples were also tested for total fluorine content, giving a value of <1 ppm—well below the limit of 50 ppm as specified in Reg. UE 2025/40 (PPWR).

Report n° 0019\FPM\FDC\26 of the 19/02/2026

Analysis		Results
Fluorinated compounds (PFAS)	Solvent extraction +LC-MS/TOF	<LoQ
Fluorine total	Combustion pyrohydrolitique oxydative	<1 ppm

-Quantitative screening for heavy metals yielded a total value below the 100 ppm limit and is therefore compliant with EU Regulation 2025/40.

Specifically, the sum of the heavy metal values listed below for BIOPAP is <1 ppm.

CSI test report n° 0206\FPM\FDC\24 dated March 12, 2024

	Results
Lead	<0,13 ppm
Mercury	<0,13 ppm
Cadmium	<0,13 ppm
Chromium (including any Cr VI present)	0,59 ppm
